ISO 50001

Energy management system certification

Optimising the production and service processes and the management of buildings can significantly contribute to energy savings.
The ISO 50001 standard is important for identifying and reducing the use of energy throughout a company's operation. It is intended to help organisations of all types and sizes manage energy. Certification to ISO 50001 benefits not only manufacturing companies, but also service providers.

Benefits of ISO 50001 certification:

- saves energy, and therefore costs
- assists compliance with legal requirements
- prevents financial losses in the form of fines.

Why choose URS?

URS has been selected as one of the pilot certification bodies for UKAS to accredit ISO 50001.

Blue Chip client ENDRESS + HAUSER is one of the first clients to become registered in the world and trusted URS to be their worldwide partner.

The extensive range and high quality of the services provided by URS has attracted more than 40,000 contracts across 32 countries.

Certified organisations can include URS logos in their promotional activities.
